

Claims

1. Information carrier band label, especially for use with wine bottles, attached to the cylindrical neck portion (1) of the bottle, which label is made of information carrier sheet of paper or plastic of the similar format, characterised in that it having a first end portion (3,3') attached to the cylindrical neck portion (1), and having a second portion connecting to the first end portion (3,3') and fixed around the neck portion (1) by a fixing means, and the second portion of the band label is capable for carrying information on its both sides, and the band label (2,2') has two positions, in the first position the band label banded around the neck portion (1) overlapping at least partially itself, beginning at the first end portion (3,3'), while in the second position the second portion is extending freely from the bottle.
2. The information carrier band label according to claim 1, characterised in that the first end portion (3,3') attached to the cylindrical neck portion (1) by glue.
3. The information carrier band label according to claim 1 or 2, characterised in that the fixing means is a self-adhesive area.
4. The information carrier band label according to claim 3, characterised in that the self adhesive area is provided with a lug (5) for gripping by fingers.
5. The information carrier band label according to claim 1 or 2, characterised in that the fixing means is a ring (10) concentrically surrounding the neck portion (1) of the bottle and the band label (2,2') in its first position.
6. The information carrier band label according to claim 3, characterised in that the ring (10) is made of elastic material.
7. The information carrier band label according to any of claims 1-6, characterised in that it is fixed in cooperation with the foil capsule (4,4') originating the sealing means of the bottle.

8. The information carrier band label according to claim 7, characterised in that the first end portion (3) is fixed on the outside of the foil capsule (4').

9. The information carrier band label according to claim 7, characterised in that the band label (2,2') in its first position is fixed under the foil capsule (4).

10. The information carrier band label according to claim 9, characterised in that the foil capsule (4) comprises a circular opening strip (6) and a longitudinal opening strip (8), the circular opening strip (6) dividing the foil capsule (4) into a cylindrical part (4A) and a cap part (4B) where after tearing the circular opening strip (6) the cap part (4B) can be removed from the bottle while the a cylindrical part (4A) remain on the neck portion (1), and after tearing the longitudinal opening strip (8) the a cylindrical part (4A) remained on the neck portion (1) can also be removed, bringing thus the band label (2) into its second position.

11. The information carrier band label according to claim 10, characterised in that the a circular opening strip (6) and the longitudinal opening strip (8) are each provided with a lug (7,9) for gripping by fingers.

12. The information carrier band label according to claim 9,10 or 11, characterised in that the band label (2,2') in its first position is surrounded by the unopened foil capsule (4) in partial overlap.

13. The information carrier band label according to any of claims 1-12, characterised in that the band label (2,2') in its first position is banded around the neck portion (1) of the bottle in an angle of at least 450°.

14. The information carrier band label according to any of claims 1-13, characterised in that the width of the band label (2,2') is not constant.

15. Information carrier band label, especially for use with wine bottles, attached to the cylindrical neck portion (1) of the bottle, which label is made of information carrier sheet of paper or plastic of the similar format, and which bottle is provided with a foil

capsule (4) covering the sealing means (D) of the bottle, characterised in that the band label (20) is capable for carrying information on its both sides, and the band label (20) has two positions, in the first position the band label (20) banded from its one end around the neck portion (1) in an angle of at least 450°, being under and fixed by the unopened foil capsule (4), and in the second position the band label (20) is extending freely from the bottle.

16. The information carrier band label according to claim 15, characterised in that the foil capsule (4) comprises a circular opening strip (6) and a longitudinal opening strip (8), the circular opening strip (6) dividing the foil capsule (4) into a cylindrical part (4A) and a cap part (4B) where after tearing the circular opening strip (6) the cap part (4B) can be removed from the bottle while the a cylindrical part (4A) remain on the neck portion (1), and after tearing the longitudinal opening strip (8) the a cylindrical part (4A) remained on the neck portion (1) can also be removed, bringing thus the band label (20) into its second position.
